Usability by third parties			3								5%
Rating for Criteria Class 4:		3									30%
Definition property and market rating for completed properties:											
Property and market rating is a standardized procedure aiming to display the sustainable quality of a property in its relevant market. The quality of a property is judged by the medium-term sales prospects at an adequate price between professionals who have access to all property and market information. The credit standing of the tenant and the borrower, as well as the default risk of the loan are not subjects of the property and market rating.
